

1. About Me Page

My name is Totti and some hobbies that I enjoy doing are playing sports such as soccer and playing video games. I also like to cook and make my own food such as eggs and noodles.

My academic/career goals are to become a better writer when it comes to writing essays and pursue a career in medicine or any of the sciences.

I was born and raised in New York City. I have 2 siblings, a younger brother and sister.

2. Resume / Resume-Style Page

Currently I am a 10th grade student who attends The Browning School (Class of 2028).

Relevant coursework to this website are both the CSE classes which consist of Engineering and Computer Science. Those 2 classes have helped me understand the process of engineering and what steps need to be taken to design what your building and how coding can help you solve real world problems and the pros and cons to the use of AI software.

Some extracurricular activities that I take part in are Varsity Track in the winter and spring, as well as JV Soccer in the fall. Also last year in 9th grade I took chess class after school which was a good way for me to improve my playmaking skills with chess while competing with other players.

3. Skills Section

My technical skills can be applied to Python as I have learned more about Python code and its functional purpose in programming. I also have some experience with Javascript code as we worked with that coding language for last year's CSE class.

My academic strengths and skills are my ability to learn new topics quickly and to help my peers who might need help understanding a topic or key concept in class. I can also make major improvements in areas that are usually my weak points in academics and turn those grades around.

Some of my personal skills are that I am able to solve problems while finding many solutions that will lead to better results and outcomes. I can also be good with managing time and making sure I get my work done by a certain deadline and keep my research neat and organized.
